help(*arg)

help__doc__()

mode__doc__()

objecthelp(*arg)

```
      Function:     objecthelp

      Description of Function:
            Print the documentation of each object in the argument list.
            Prints a blank line if no documentation.

      Example of Use:
             import vcs
            vcs.objecthelp(object)   #  where: object is the Python objec
